c.pCO Mini Smart

New product models

Dear Colleagues,

This is to inform you that two new part numbers are available for order in the cpCO Mini family. These new *Smart* versions join the existing High-End, Enhanced and Basic models.

c.pCO Mini Smart represents the completion of the range, making the customer proposal even more flexible.

The main features of the new Smart models are:

- New CPU for higher performance
- Retain memory doubled in capacity (32 Kbytes)

The new part numbers are:

Part number	Description	Connectivity	I/O
P+D0N0UE00LS0	c.pCO Mini Smart neutral	Micro USB. BMS, FB and display (all non-opto-isolated)	10 universal I/Os
P+D0N0UH00LS0	c.pCO Mini Smart neutral	Ethernet. Micro USB. FB and display non-opto-isolated	6 relays

The corresponding multi-pack part numbers, P+D0N0UE00LS1 and P+D0N0UH00LS1, are already activate and can be ordered. 10 pieces per pack. The latter should be used for product proposals to OEMs.

Possible application examples

The new part numbers do not feature an electronic valve driver. It is therefore recommended for applications in which there is no refrigerant circuit.

Given the connectivity features, these should be proposed as customisable gateways for the retrofit of existing applications.

For further details relating to other possible uses, contact the relevant sales office.

Please do not hesitate to contact us for any further information.

Best regards
